ABSTRACT OF DISCLOSURE

There is provided a terminal automatically executing access processing to a URL registered in advance on a network

5 in response to the cancellation operation of the power saving mode. This enables to execute accessing the predetermined URL on the network only by the cancellation operation of the power saving mode without need of an extra operation for the processing. Also, in a terminal having

10 a folding mechanism, predetermined processing is automatically executed in response to the open motion from the closed condition. This enables to execute the predetermined processing only by the open motion without need of an extra operation for the processing. Thus

15 operability of the terminal is improved, and as a result, convenience for the user is improved.
